

R. Peter Mackin is Senior Vice President of Analytical Services at Utility System Efficiencies, Inc. He has over 32 years of power system planning and computer application development experience and has been involved in power system planning and operating activities in the western US since 1985. He has studied the electric transmission system impacts of new high voltage transmission line proposals as well as new generation interconnection requests for utility scale renewable and conventional generation technologies. He holds a B.S. in Civil Engineering and an M.S. in Electrical Engineering, both from Montana State University, Bozeman, and is a registered professional Electrical Engineer in the State of California.
